

SEAN RHANI JARIN DELA CRUZ

FULL-STACK AGENTIC AI AUTOMATION DEVELOPER

www.seandelacruz.com | delacruzseanrhani@gmail.com | Pampanga, Philippines
www.github.com/SeanRDC | www.linkedin.com/in/sean-rhani-dela-cruz-834573334

CAREER SUMMARY

Full-Stack Agentic AI Developer and Computer Science student specializing in backend AI engineering and workflow automation. Currently interning as a Backend AI Engineer at Flyrank AI, where I build Python-based AI infrastructure and integrate it with scalable frontend architecture. My technical stack is backed by professional certifications in IBM AI Development, Google UX Design, and n8n workflow automation.

EDUCATION

Holy Angel University | Philippines
Bachelor's degree in computer science | Expected Graduation: 2028

- Certifications:**

IBM Professional AI Developer Coursera, IBM Skills Network	2026
Professional Google UX Design Coursera, Google Career Certificates	2025
Open Worldwide Application Security Project (OWASP) Coursera, Infosec	2026
Python Essentials 1 & 2 Cisco Networking Academy	2024
CSS, HTML JavaScript Essentials 1 & 2 Cisco Networking Academy	2024

TECHNICAL SKILLS

Languages: Python | TypeScript | JavaScript | Java | SQL | Dart
Frameworks: React (Next.js) | Node.js | Django | Flask | Express.js | Flutter
Infra & Databases: AWS | Docker | PostgreSQL | MongoDB | MySQL | SQLite | Firebase | Vercel | Render
Tools & CI/CD: GitHub Actions | GitLab CI | OpenAPI | Vite | Figma

WORK EXPERIENCE

- Backend AI Engineer Intern | Flyrank AI** June 2026 - Present
 - Engineered Python-based REST APIs and robust CRUD systems utilizing PostgreSQL, SQLite, streamlining the data architecture for agentic AI applications and cutting database query latency by ~30%
 - Operationalized AI fluency by integrating high-speed LLM inference APIs (Groq, Gemini, OpenAI models) into core backend workflows, automating complex reasoning tasks and reducing manual data processing.
 - Architected and deployed scalable backend infrastructure, supporting the rapid continuous delivery of AI-driven features and accelerating the team's overall deployment cycle.
- Freelance Satellite Imagery Annotator | RYU Data Centre** March 2022 – August 2022
 - Annotated and classified high-resolution satellite imagery to generate precise training datasets for machine mapped models, maintaining a ~99% quality assurance accuracy rate.

- Processed ~400 images and geospatial data points per week, mapping specific features such as urban infrastructure, agricultural boundaries, residential homes for computer vision applications.

Barista | McCafé

June 2025 – Feb 2026

- Executed high-volume customer service operations, accurately processing and fulfilling ~100 orders per shift during peak hours in a fast-paced environment.
- Collaborated within a cross-functional team to streamline front-of-house workflows and manage inventory, maintaining strict compliance with quality and safety standards.
- Balanced concurrent responsibilities across the POS system, mobile order queue, and beverage station, coordinating closely with a team to eliminate service bottlenecks during sustained high-pressure rushes.

PROJECTS

Message Notification Router (HackerRank Orchestrate) | <https://github.com/SeanRDC/hackerrank-orchestrate-SeanRDC>

Stack: Python, Gemini 3.5 Flash Lite, Pydantic, Google GenAI SDK

- Engineered an AI-powered WhatsApp routing agent within a 24-hour hackathon to autonomously classify multimodal messages (text, images, audio) into notify, digest, or mute priority queues.
- Enforced 100% deterministic routing outputs by integrating Pydantic validation schemas (RoutingDecision) with the Gemini API, eliminating hallucinated responses and ensuring strict JSON compliance.
- Architected a resilient batch-processing pipeline featuring automated 429 rate-limit retries and secure try/finally cleanup for asynchronous media uploads, ensuring flawless execution across the evaluation dataset.

Interactive 3D Developer Portfolio | <https://seandelacruz.com> | <https://github.com/SeanRDC/Sean-Portfolio-Site/tree/main/PortfolioV5>

Stack: React, TypeScript, WebGL, GSAP, Tailwind CSS

- Architected a high-performance interactive portfolio using React and TypeScript, integrating custom WebGL fragment shaders to render real-time fluid background distortions and dynamic noise overlays.
- Engineered a 360-degree 3D certificate carousel and seamless cross-layout view transitions utilizing GSAP and Lenis, calculating complex spatial transformations for optimized smooth scrolling.
- Implemented a production-grade analytics pipeline to capture client-side routing events and monitor Core Web Vitals (CLS, INP, LCP) via Google Analytics, ensuring optimal rendering performance.

Beaded by Unknown (Custom E-Commerce Platform) | <https://beadedbyunknown.shop> | <https://github.com/SeanRDC/Beaded-By-Unknown-Website>

Stack: MongoDB, Express.js, React, Node.js (MERN), PayMongo

- Engineered a real-time custom jewelry builder utilizing the MERN stack, enabling users to dynamically configure metal, stone, and setting combinations live on the storefront.

- Architected a headless checkout flow integrated with the PayMongo API, seamlessly processing secure payments and automating product order fulfillment for a live small-scale business.
- Managed end-to-end technical operations including domain hosting, database administration via MongoDB Atlas, and production deployment.

Peony (Digital Flower Encyclopedia) | <https://flower-catalogue-website.vercel.app> | <https://github.com/SeanRDC/Flower-Catalogue-Website>

Stack: React, Framer Motion, Google OAuth API, Axios, REST APIs

- Architected a dynamic digital herbarium utilizing React and Framer Motion, engineering a custom multi-parameter filtering engine (by color, petal shape, and symbolism) to seamlessly render complex botanical datasets with zero-refresh state updates.
- Engineered a robust authentication pipeline combining Google OAuth integration with a custom 6-digit OTP verification system, allowing users to securely curate and persist personal 'Collections' and 'Favorites' via a backend REST API.
- Optimized frontend rendering and data retrieval by implementing debounced search auto-suggestions, custom cubic-Bezier smooth scrolling, and asynchronous skeleton loaders, eliminating UI blocking during network requests.
