Sean Rhani Jarin Dela Cruz

Full-Stack Developer | AI Automation Engineer | Backend AI Engineer

Pampanga, Philippines | delacruzseanrhani@gmail.com | seandelacruz.com
github.com/SeanRDC | linkedin.com/in/sean-rhani-dela-cruz-834573334

PROFESSIONAL SUMMARY

Full-Stack Developer and AI Automation Engineer pursuing a Bachelor of Science in Computer Science, specializing in backend AI engineering, LLM integration, and workflow automation. Currently a Backend AI Engineer Intern at Flyrank AI, building Python REST APIs and agentic AI infrastructure on PostgreSQL. Experienced in React, TypeScript, Node.js, FastAPI, and Flutter, and in leading student development teams. Certified in IBM AI Development, Google UX Design, and n8n workflow automation.

EDUCATION

Bachelor of Science in Computer Science **Expected Graduation: 2028**

Holy Angel University, Angeles City, Pampanga, Philippines

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Dart, GDScript

Frameworks & Libraries: React, Next.js, Node.js, Express.js, FastAPI, Django, Flask, Flutter, GSAP, Tailwind CSS

AI & Automation: LLM Integration, Agentic AI, Gemini API, OpenAI API, Groq, Pydantic, n8n, Prompt Engineering

Databases & Cloud: PostgreSQL, MongoDB, MySQL, SQLite, Firebase, AWS, Docker, Vercel, Render

Tools & Practices: Git, GitHub Actions, GitLab CI, CI/CD, REST APIs, OpenAPI, WebSockets, Vite, Figma, Agile

WORK EXPERIENCE

Backend AI Engineer Intern **June 2026 – Present**

Flyrank AI

- Engineered Python REST APIs and CRUD systems on PostgreSQL and SQLite, streamlining the data architecture for agentic AI applications and cutting database query latency by ~30%.
- Integrated high-speed LLM inference APIs (Groq, Gemini, OpenAI) into core backend workflows, automating complex reasoning tasks and reducing manual data processing.
- Architected and deployed scalable backend infrastructure that supports continuous delivery of AI-driven features and shortened the team's deployment cycle.

Barista **June 2025 – February 2026**

McCafé

- Processed and fulfilled ~100 orders per shift during peak hours in a fast-paced, high-volume customer service environment.
- Collaborated with a cross-functional team to streamline front-of-house workflows and manage inventory while meeting quality and safety standards.

Freelance Satellite Imagery Annotator **March 2022 – August 2022**

RYU Data Centre

- Annotated and classified high-resolution satellite imagery to build training datasets for machine learning mapping models, maintaining ~99% quality assurance accuracy.
- Processed ~400 images and geospatial data points per week, labeling urban infrastructure, agricultural boundaries, and residential homes for computer vision applications.

PROJECTS

HAU-SYNC – Clinic Records & Appointment System (Project Lead)

https://github.com/SeanRDC/Final-Project-Software-Engineering

Tech Stack: FastAPI, React, TypeScript, PostgreSQL, WebSockets

- Led a 5-person development team as project lead and co-developer, organizing sprint planning and team meetings while building core features end to end.
- Engineered a patient record and appointment system that replaced the Holy Angel University Clinic's paper logs, giving the front desk, nurse, and doctor one shared record synced in real time over WebSockets.
- Architected role-based access control with audited access to patient data, keeping all records on the clinic's own network in compliance with the Philippine Data Privacy Act.

- Built medicine inventory tracking and reporting modules on a FastAPI and PostgreSQL backend, digitizing clinic operations from intake to restock.

Message Notification Router – HackerRank Orchestrate Hackathon
https://github.com/SeanRDC/hackerrank-orchestrate-SeanRDC
Tech Stack: Python, Gemini API, Pydantic, Google GenAI SDK

- Engineered an AI-powered WhatsApp routing agent within a 24-hour hackathon that classifies multimodal messages (text, images, audio) into notify, digest, or mute priority queues.
- Enforced deterministic routing outputs by pairing Pydantic validation schemas with the Gemini API, preventing hallucinated responses and guaranteeing strict JSON compliance.
- Architected a resilient batch-processing pipeline with automated 429 rate-limit retries and safe cleanup of asynchronous media uploads across the full evaluation dataset.

Velo – AI-Powered Canvas LMS Client
https://velo-landing-page-delta.vercel.app | https://github.com/SeanRDC/Velo-A-better-canvas
Tech Stack: Flutter, Dart, Canvas REST API, Groq AI, React, GSAP

- Engineered a distraction-free, local-first Canvas LMS client in Flutter that uses the Canvas REST API to pull every deadline from all enrolled courses into one sorted feed.
- Integrated a tool-calling AI co-pilot and study planner powered by Groq, letting students ask about their coursework and generate study schedules from live assignment data.
- Implemented offline caching for access without a connection, and shipped a scroll-driven landing page built with React and GSAP, deployed on Vercel.

Project HAU – 2.5D Pixel Art Campus Adventure Game (Project Lead)
https://github.com/SeanRDC/Project-HAU
Tech Stack: Godot 4, GDScript, Custom Shaders

- Led a 6-person game development team as project lead, setting direction, running team meetings, and building most of the core gameplay and rendering systems.
- Developed a 2.5D pixel art adventure in Godot 4 that recreates the Holy Angel University campus 1:1 from its real buildings as an explorable digital twin.
- Engineered a hybrid rendering pipeline that places pixel art sprites in a lit 3D world, using custom shaders for real-time shadows, a time-of-day cycle, weather, and ambient sound.
- Implemented an NPC dialogue system with persistent state so campus characters remember player answers and respond differently across conversations.

Beaded by Unknown – Custom E-Commerce Platform
https://beadedbyunknown.shop | https://github.com/SeanRDC/Beaded-By-Unknown-Website
Tech Stack: MongoDB, Express.js, React, Node.js (MERN), PayMongo API

- Engineered a real-time custom jewelry builder on the MERN stack, letting customers configure metal, stone, and setting combinations live on the storefront.
- Architected a headless checkout flow integrated with the PayMongo API, processing secure payments and automating order fulfillment for a live small business.
- Managed end-to-end technical operations including domain hosting, MongoDB Atlas database administration, and production deployment.

Interactive 3D Developer Portfolio
https://seandelacruz.com | https://github.com/SeanRDC/Sean-Portfolio-Site
Tech Stack: React, TypeScript, WebGL, GSAP, Tailwind CSS

- Architected a high-performance interactive portfolio in React and TypeScript, using custom WebGL fragment shaders for real-time fluid background distortion and noise overlays.
- Engineered a 360-degree 3D certificate carousel and seamless view transitions with GSAP and Lenis, tuning spatial transforms for smooth scrolling.

CERTIFICATIONS

- IBM AI Developer Professional Certificate – IBM Skills Network (Coursera) 2026
- n8n Professional Certificate – n8n Education Team 2026
- OWASP Top 10 Security – Infosec (Coursera) 2026
- Google UX Design Professional Certificate – Google (Coursera) 2025
- Python Essentials 1 & 2; HTML, CSS & JavaScript Essentials – Cisco Networking Academy 2024
